NEWEST PLANT

Introductions

HANSEN SEEDLESS PEAR

A new discovery that will change the pear culture of America! No seeds and scarcely a trace of a core. Large size fruit. Delicious flavor and attractive color. Heavy bearing. Hardy north into Canada. Bears on very young trees. Supply limited, so please order early. Each, \$1.75; 3 for \$5.00.

SODAK PEAR

Seedless and Coreless

Prof. N. E. Hansen's newest pear introduction. No seed and no core. Excellent quality to eat. Big size. Maintains its shape and flavor when preserved. Bears quickly and is very productive. Hardy and blight resistant. Each, \$1.75; 3 for \$5.00.

HANSEN'S NEW GIANT RED FLESH BUSH CHERRY

Rich Dark Red Flesh

Now we are able to offer for the first time one of the choicest of all selections of Prof. N. E. Hansen's Famous Bush Cherry. Besides its extremely large size and most delicious sweet flavor, it has a beautiful red flesh clear through from skin to pit. The fruits are large like shown in photo. The skin is an intense purplish red. The small bush-like tree grows but a scarce 3 feet high yet bears immense crops of fruit. Can be planted in the garden 3 to 4 feet apart and still have plenty of room for full development. Makes a most excellent fruiting hedge. Is most beautiful when in full bloom in spring.

CARL A. HANSEN NURSERY

BROOKINGS, SOUTH DAKOTA

WANETA

The Giant of Hardy PLUMS

Highly flavored, of delicious dessert quality. Richly colored red skin, free from acerbity, a small pit, and fine firm yellow flesh. Up to 2 inches in diameter.

Two of the most famous Hansen Plums. They bear when very young, are very hardy, and more sure to produce year after year.

WANETA

OPATA CHERRY PLUM

OPATA

Excellent quality. The fruit is dark purplish red with firm, green flesh. Fruits freely on one-year old shoots. Season very early.

Manchurian Apricots

FRUIT IN ABUNDANCE
FOR EVERYONE
Hardy—Quick to Bear

The Manchurian Apricots are hardy in the coldest places, and have an almost frost-proof blossom. They were brought from a country where temperatures get as low as 50 and 60 degrees below zero, with late spring frosts, and hot dry weather in summer, up to 115 degrees.

If you like good fresh fruit, picked from your own trees, you should have a few of these new hardy Apricots. They ripen just before the plums.

Carl Andreas Hansen

FOREWORD

We always take a great deal of pleasure each year in greeting our many friends everywhere and sending them our catalog. We feel that we know personally everyone who sends us an order. Our customers know we do not offer everything old and new in horticulture, but rather just some of the newest and best and especially hardy stock. Practically everything we offer in this catalog is an introduction of Prof. N. E. Hansen or Carl A. Hansen or Paul R. Hansen. Many hardy fruits and ornamentals, now widely propagated by many nurseries, saw their first light of publicity in these pages.

Niels Ebbesen Hansen
1866—1950

LIFE & WORK OF Dr. N. E. HANSEN

A Biographical Story of
Horticultural Adventure
by Mrs. H. J. Taylor

"TO PLANT THE PRAIRIES AND THE PLAINS"

If you are interested in Dr. N. E. Hansen's work in fruit breeding, hybridizing and explorations, get this book.

It tells of his many tours to Russia, Siberia and far-off places in search of new plant material. Of his many strange, interesting and exciting adventures in wild country and with native people.

It tells of his many plant experiments, his processes of plant breeding, selecting and improving.

It is a scientific book of great interest, written in the style of a thrilling novel.

PRICE \$2.25 PREPAID

TERMS

Send remittance with your order, by cash, money order, or check. If by check, please add 5 cents extra for bank charges. No C. O. D. orders accepted.

No packing charge on orders of \$2.00 or more, but on orders for less than that amount please add 25c.

All shipments of Plants and Seeds will be sent collect for the delivery charges unless otherwise stated, by what we consider the best and cheapest way. If you want a small package to be sent by parcel post prepaid, be sure to add enough more for postage (usually about 10% will cover it), with a minimum of 25c per parcel. If seed or plant shipments must be sent to a prepaid station, be sure to include the shipping charges in your remittance.

South Dakota Customers please add the 2% Sales Tax.

Hansen HARDY PEARS

HARDY—PRODUCTIVE—GOOD

These pears were introduced from Siberia and Northern China by Prof. N. E. Hansen and improved by him. They are perfectly hardy anywhere in the Northwest, free from disease and resistant to fire blight, the dreaded disease of the standard varieties.

✓ **NORTH CHINA PEAR.** Grown from seed of some of the hardiest pears of North China. Of the sand pear type. Strong growth. Fruit good size, juicy and of a pleasant good quality. Good keepers. Each, 75c; 3 for \$2.00.

✓ **HANSEN SIBERIAN PEAR.** Hardest pear introduced from Siberia by Prof. N. E. Hansen. Of the Russian sand pear type of fruit and the hardest of pears for the North. Each, 75c; 3 for \$2.00.

✓ **HARBIN PEAR.** Large, vigorous growing tree. Fruit of fair size and quality. Good for eating fresh and cooks into fine sauce and preserves well. Each, 75c; 3 for \$2.00.

Sapa CHERRY PLUM

Dark Purple-Red Flesh and Skin

SAPA

HARDY .. GOOD .. PRODUCTIVE

FRUIT TO PLEASE EVERYONE

WORTHY OF HIGHEST PRAISE

Early Bearing

Semi-Dwarf

One of the Most Popular Hansen Plums.

Sapa is the Sioux Indian word for "black," and alludes to the skin, flesh and juice of this remarkable hybrid. The fruit has rich, dark purple-red skin, flesh and juice. The tree is bush cherry-like in habit, forming fruit buds freely on one-year trees. The rich purple color of the skin is dulled at first by being overspread with a thin gray, which will disappear as soon as the fruit has ripened thoroughly. Sapa bears freely on one-year shoots and has attained much popularity. Sapa is early, large, productive, and very hardy; very good to eat fresh, and makes delightful preserves and jams.

Hansen's Special HYBRID PLUM SELECTIONS

Very Hardy ... Heavy Bearers

These are some selected Plum Hybrids we are offering for the first time. They are selected seedlings grown from mixed plantings of the best of Prof. N. E. Hansen's famous hybrid plums. By experimentation and selection we have found that they seem to have all maintained the high standard of hardiness and many have the high quality flavor and size of Prof. N. E. Hansen's other plums.

They are all good eating, good size, prolific bearers, and make the most delicious plum preserves. They are excellent pollenizers and will make your other plums bear better. We only have a limited quantity to offer this year, so order early.

Dakota Producer Plums

HANSEN IMPROVED

These are plums which we have been selecting and improving for a number of plant generations. They are all hardy and good to eat. They will stand temperatures of downwards to 40 degrees below zero in winter and upwards to 115 degrees in summer.

The fruit of these plums varies in size, from about 3/4-inch to 1 1/2 inches and over. They have been developed from the native wild plums of the Dakotas, Minnesota and Canada. Their yield is abundant—plenty for eating, plenty for preserves.

It is hard to beat good old fashioned plum jam as a spread for bread. Our aim with Dakota Producer Plums has been to improve this; to improve one of nature's best, rich foods.

Because of the natural vigor of growth and fruiting power, they are especially good to pollinate the various hybrid plums in your yard and orchard. They will help all of your plums to set their full crop capacity of fruit, which they may not now produce because of weak pollen.

HANSKA

HANSKA APRICOT PLUM

A hybrid of the wild northwestern plum and the large, firm fleshed, fragrant apricot plum of China. In fruit the Hanska closely resembles its Chinese parent in form, color, fragrance, quality and firmness of flesh. The pit is very small.

Sizes and Prices Same as for Sapa.

Hansen's OKA CHERRY

VERY HARDY

DWARF HABIT

EARLY BEARING

WINE-RED FLESH

LARGE FRUIT

Large and Fine
Wine Red Flesh

DELICIOUS FLAVOR!

NEWEST AND BEST

One of Prof. N. E. Hansen's latest cherry-plum introductions and considered his best so far.

DARK, LUSCIOUS, WINE-RED FLESH

The flesh color is a rich, intense purplish black red. It is in all a very remarkable fruit to look at and surely a delight to eat. Jelly and jam made from Oka Cherries are as deliciously sweet as they are beautiful to look at.

The tree of Oka has a dwarf bushy habit and bears from the ground up. This remarkable feature is of unique value when harvesting the fruit. No need for a stepladder for all the fruit is within easy reach. But the dwarf size in no way indicates the size of the crop of cherries, for the strength of the plant goes into fruit production and not into surplus tree growth.

EARLY BEARING—VERY HARDY

Oka Cherry, like the other of Prof. N. E. Hansen's Bush Cherry hybrids, bears extremely early—always, if the season is at all favorable, the year after planting.

HANSEN MANCHURIAN ELM

TRADE MARK—U. S. Pat. Off. Registry Applied For
COPYRIGHT 1952 BY CARL A. HANSEN, BROOKINGS, S. DAK.

Strong Spreading Branches

!! First Time Offered !!

For SHADE

For BEAUTY

For WINDBREAK

This new elm may be the salvation of the elm trees in America. In tests it is apparently free and immune to the dreaded Dutch Elm disease.

It was introduced and brought personally by Carl A. Hansen and Dr. N. E. Hansen

from the far off rugged mountains near the Manchurian-Siberian border, where temperatures get down to 55 and 60 degrees below zero.

The leaf of this new elm is similar to the Chinese Elm, but is a much more glossy, rich dark green, and more firm and rugged, and larger.

The tree itself branches better with good strong, sturdy limbs that branch out with firm crotches that do not split like the American or Chinese Elm.

Hansen Manchurian Elm grows very fast. In tests we have seen it grow 8 to 12 feet in one season. The bark is smooth with slight corrugations. This tree has an exceptionally strong root system with lots of hair roots to absorb moisture. It will grow well in especially tough places, where it gets very cold or dry, though it grows better in more favorable locations.

This is the first time we have offered this amazing new elm for general distribution and because it is new our supply is short and we have only a very limited number to offer this year. If you wish some, send in your order right away while our supply lasts. We may not be able to offer it again soon.

HANSEN IMPROVED

Easy to Grow . . .

Good Flavor - Highly Productive -

Beautiful in Spring Flower.

The Development of Years. Hansen Improved Bush Cherries are the result of over forty years of untiring selection work by the great plant wizard, Prof. N. E. Hansen at South Dakota State College, Brookings. He has developed what was formerly the rather small, little known, western South Dakota Dwarf Bush Cherry, into a fruit of large size, desirable taste, good habits, wonderful bearing, and beautiful in flower, fruit and foliage.

Fruit of Good Quality. The fruit is good to eat from the bush, is fine in sauce and makes a wonderful jam of the most superb flavor and rich color imaginable.

Grows Bush-Like. Though the fruit of this cherry resembles a cherry in size and shape, the plant itself grows in a bush form, branching and bearing from the ground up. Usually bears the year after planting. It always retains its dwarf stature which is of fine value for planting in the garden, as it doesn't take up near the room of an ordinary plum tree and yet often bears more.

Beautiful in Plantings. In landscape planting a few of the bush cherries are very desirable as they are dwarf and bushy, and a great aid in foundation covering

The foliage, a beautiful silvery green, turns to a rich red and gold in fall, adding a very desirable color touch to landscape plantings.

N. E. Hansen With Branches of the Hansen Bush Cherry.

The profuse masses of white flowers in early spring, completely covering the bushes, are a glorious sight. The fruit later is ornamental as well as useful.

A Desirable Good Fruit and Ornamental for Extensive Planting

BUSH CHERRIES

Sure to Produce *Hardy Everywhere*

Disease Resistant

Makes a Good Low Hedge.
Because of their dwarf bushy habit these Hansen Improved Bush Cherries make a most beautiful silvery green ornamental low hedge for the front lawn, as well as in the garden.

Hardy Everywhere—Disease Resistant. The hardiness of these Bush Cherries is unquestioned. They have been used as the sires in a number of Prof. N. E. Hansen's introductions, because he knew it would give the new variety the hardiness they need to withstand the cold and adverse weather conditions we often get. Their sturdiness and resistance to disease is another outstanding characteristic.

Linda Darnell, Columbia Pictures Star, about to plant one of our Hansen Bush Cherries that we sell in a special wrap through F. W. Woolworth Co., S. H. Kress & Co., and many of the other largest department stores throughout the country.

Plant These HANSEN BUSH CHERRIES Because...

- 1—They are easy to grow and perfectly hardy everywhere.
- 2—Good to eat fresh and make the most delicious preserves.
- 3—Quick to bear. Bear heavy, and annually.
- 4—Are dwarf growing, bushy, need little room.
- 5—Are excellent for hedges or ornamental shrubs.

RECOMMENDATION FOR PLANTING

For best results for fruiting these new Improved Hansen Bush Cherries should be planted 2 to 4 feet apart, in rows 4 to 6 feet apart. Plant two or more for better pollination.

Around the home for beauty and use, plant them anywhere in groups.

As a hedge they may be planted close, 1 to 1½ feet apart, and may be kept trimmed, though they won't bear as much that way.

Plant them in abundance and have fine fruit for years to come.

MAY DAY

THE BEAUTIFUL FLOWERING LAWN TREE

LOVELY . . FRAGRANT . . HARDY
VIGOROUS

For superb flowering beauty on the lawn or boulevard, none excels May Day Tree. Its fragrant, fine white flowers early in spring create a massive bouquet of loveliness. The individual flowers are fully a half inch across. A few days later the leaves unfold in all their glossy beauty, far ahead of all the other trees.

FIRST TO BLOOM

Always in bloom by the first of May here it was well named the May Day Tree, and the long racemes of fragrant white flowers, so thickly set on fine branches, may well be used for garlands and to crown the Queen of May.

BIRDS ENJOY FRUIT

The shiny black cherry fruit, though edible and good for jelly, is soon claimed by the birds in preference to what we consider better fruit. Thus our good fruit is spared, yet the birds are fed.

Close-Up View of the Flowers of the May Day Tree.

HOPA-Rose Flowering Crab

Attractive Cheery Desirable

A NIELS E. HANSEN INTRODUCTION

A remarkable tree which is entirely covered with beautiful rose colored blossoms in May. Hopa is very hardy, blooms when but five feet in height, and is of such striking beauty that it deserves a place on every lawn. The fruit is red inside and out, and is very ornamental. The tree makes a very strong, well balanced growth. Hopa may be planted in a group with tall growing shrubbery, or it may be planted as a specimen tree with excellent results.

Every Lawn Should Have Some

INTRODUCED BY PROFESSOR N. E. HANSEN

The superb, graceful beauty of the Niobe Weeping Willow is near to the utmost in distinctive specimen ornamental planting. There is no doubt that their beauty will be a continual joy to those who are fortunate enough to have these lovely trees on their home grounds. In winter and summer their graceful branches sway in the gentlest breeze and wave their beauty to all.

Prof. N. E. Hansen introduced Niobe Weeping Willow from the colder parts of Europe and so it is perfectly hardy far north into Canada. Beautify your grounds with this fine, hardy Weeping Willow.

Glorious Springtime Blossoms

GLORIOUSLY BEAUTIFUL

Its glorious, gorgeous, early spring magnificence adorned in an avalanche of large pink and white flowers of superb fragrance begins its alluring loveliness. This unquestionably makes it both a fine specimen ornamental for the lawn and wonderful as a street tree. Used in a windbreak, it gives the whole place a living frame of beauty.

Fruit Fair Size, Good Flavor. Makes Fine Jams, Jelly, Cider.

A commendable tree for ornament and utility. It must be seen and used to be fully appreciated.

The blossoming is followed by a mass of dense, bright green foliage, covering heavily shouldered and wide spreading branches, thus making it a fine shade tree for the street or lawn.

Then comes the bright red and yellow fruits which can be used for jelly, or pickling, or are best pressed out and the juice added as the desired flavor in other fruit jams and jellies. The juice also makes remarkable cider. The tree usually bears when about three years old.

The tree itself grows to a good height and lives long. Its growth is rapid, sturdy, and vigorous. It is very drought and disease resistant and because of its origin is absolutely hardy everywhere.

Being of such a well built nature with staunchly branched limbs and with such a fine heavy network of branches, it makes a splendid tall windbreak. Note our real low prices on windbreak stock, that we are able to offer you this year for groves and shelterbelts.

HARDY ROSES

Make Your Dreams Come True

To many there is no flower in the garden lovelier than a rose, yet, contrary to the opinion of many, they are easy to grow if the proper simple care and attention is given them. We sell only the hardiest sorts that have proven themselves in home gardens throughout the Northwest.

HANSA. Best Hardy Red Rose. Large, double flowers over an unusually long blooming season. Sturdy growth and absolute hardiness.

SIR THOMAS LIPTON. Best Hardy White Rose. Large, double, pure white. Profuse bloomer.

BELLE POITEVINE. Good Hardy Pink Rose. Very large, double, fragrant flowers of a bright silvery rose-pink.

CRIMSON RAMBLER. Famous everywhere. Vigorous grower, glossy foliage, panicles of blooms, large and perfect for weeks.

Hansa Rose

A Sensational New Rose . . .

HANSEN'S THORNLESS

A Rose Without Thorns!

Prof. N. E. Hansen is working with thousands of rose seedlings and is attracting nation wide attention for his efforts toward producing lovely, hardy roses without thorns.

His Thornless Rose we offer here is really thornless. Not only on the main stems, but on the branches as well. The plant is of sturdy upright growth with attractive foliage, which makes it desirable as a shrub, and it is perfectly hardy as it will stand fifty degrees below zero without protection.

The flowers are of a delicate pink color and very fragrant.

The branches likewise are very attractive, being a bright glowing red throughout the year. The red seed pods clinging to the red stems in winter time makes them very ornamental.

Every Man's Orchid

HANSEN'S NEW SHILKA Everblooming ORCHID IRIS

From the wilds of Siberia, near the town of Shilka, comes this new, hardy, Everblooming Orchid Iris, which was brought to this country by Carl A. Hansen from one of his world-wide plant exploration expeditions.

A real hardy outdoor perennial for the Northwest. It blooms continuously for six to eight weeks after all other Irises are gone. Its wide, spreading blooms possess lovely, delicate tones of superb orchid and blue, mingled with creamy white as found in the finest orchids.

With this latest addition to the Iris family, it is now possible for everyone to have flowers growing in their own gardens, so like the expensive orchids. Long slender stems bear as many as twelve to fifteen superbly beautiful flowers on each plant, all at one time, hundreds before the season is over.

The flowers of the new Shilka are delicately fragrant, a remarkable attribute to an already beautiful flower. Many of the blossoms come double.

The foliage, like other Irises, is attractive all through the season, in beds or in border plantings.

Everyone who likes Irises should plant this newest and finest, Shilka Iris.

Lovely, Dark Red Flowers—Maroon-Red
Cut-Leaf Foliage Tinted with Silver.

RED SILVER Flowering Crab

A CARL A. HANSEN INTRODUCTION

A REAL WORTHWHILE ORNAMENTAL

The glorious flowering crab that is completely red in flower, leaf, bark and fruit. Makes a fine lawn tree. Rich maroon red from top to bottom. A very remarkable new ornamental recently introduced by Carl A. Hansen. Most flowering crabs are desirable because of the mass of blooms which they have in such profusion for a short time, but the Red Silver is beautiful from spring until late fall because of its all-over red color.

The underside of the leaves are tinsed with silver, making it all the more beautiful as the blend of maroon and silver is a unique combination throughout the season. The leaves are somewhat cut-leaf, adding to its striking beauty.

This small tree, graceful in its lines, with such beautiful foliage, has a color so intense that it is little affected by the summer heat. The flowers are a rich, deep red and altogether lovely. One of the greatest hardy flowering crabs ever introduced. Showy and different.

HANSEN PROSO

THE DRY LAND WONDER GRAIN !

One Bundle of Proso
Grown in Western S. Dak.

The Best Catch Crop for the Northwest—Matures in 60 Days. Can Be Planted Later and Will Stand More Dry Weather Than Any Other Grain.

Here is an all-purpose grain that farmers have been looking for. It matures quickly, is an abundant producer, very drouth resistant, makes good forage, can be planted late, has white kernels, is good food for live stock and poultry, makes a fine breakfast food, is a heavy grain, and grows in any soil.

Best Catch Crop. Proso matures in 60 to 70 days, and should not be sown until after the middle of May. It may even be planted as late as July.

Stands More Dry Weather Than Any Other Grain. During the drouth, many farmers seeded Proso after the other crops had failed, and when the late rains came they had plenty of feed.

Pasture and Forage. Proso may be pastured until it heads out. It is equally good pasture after harvest until frost. If planted real early, Proso furnishes pasture for those who are short on feed. Proso straw makes a wonderful forage because it retains its green color and does not chaff.

Ideal for Cattle and Hogs. Proso grain is considered one of the best feeds for live stock, equal to or better than wheat. Farmers tell us that ground Proso is equal to corn in finishing off live stock for market.

Ideal for Poultry. In a very interesting poultry feeding test with White Proso mixed with corn, oats, barley and wheat, none of the others were touched until the Proso was gone. It is very valuable because of its high protein content. Proso does not have to be threshed for poultry feeding, but may be fed in shock.

Makes Fine Breakfast Food. Carl A. Hansen, while studying seeds and plant life in Russia, noticed that Proso was used extensively as a food. He experimented with it and by puffing it obtained a very tasty breakfast food, which he named Proso Puffs.

White Kernel. Improved Strain. Prof. N. E. Hansen, the famous plant wizard, introduced the Hansen Proso from Siberia, and selected it for its white color, large kernels, and greater productivity. The seed is round, pure white, several times the size of millet, growing in a sprangly head. It should not be confused with the colored prosos, as Hansen's Proso is superior in every way: size, color, and production.

HOW TO PLANT. Proso may be planted on any kind of land, either broadcast or drilled. Weeds may be plowed under two or three times and killed before it is time to plant Hansen Proso. Many farmers report that by planting Hansen Proso in late May or June, the plants will produce 15 to 25 stems each. Proso may be harvested with a combine or it may be shocked and threshed. For combining it should be ripe, but for shocking it should be cut when the stalks are still quite green. Average yield of Hansen Proso is from 40 to 60 bushels per acre with a seeding of 20 to 30 lbs. per acre. The grain averages 60 to 64 lbs. per bushel.

ANOKA, *the Wonder Apple*

**A MASTERPIECE OF THE
FRUIT WORLD**

★ **One of Prof. N. E. Hansen's
Greatest Introductions**

ANOKA—The Best of 10,000 Seedlings

FINE EATING—VERY PRODUCTIVE

Anoka is a round, red-striped apple of attractive appearance and of good quality. The fruit ripens early, a very good early summer eating apple, with very juicy, pleasant, sub-acid flesh of peculiar characteristic flavor that pleases everybody.

Anoka is surprisingly productive, often loading its branches till they bend nearly to the ground, yet due to its sturdy habit, seldom breaks under the great weight.

**Three-Year Anoka Tree Bearing
a Good Crop of Fruit.**

**Prof. N. E. Hansen, the Plant Wizard, and a
Mature Anoka Apple Tree.**

ANOKA APPLE TREE PRICES

PLANT THE ANOKA APPLE

The Wonder of the Age—Because:

- 1—Anoka bears the second year after planting.
- 2—Anoka bears large crops of apples every year.
- 3—Anoka is an excellent early summer eating apple.
- 4—Anoka may be planted closer than other apples.
- 5—Anoka is hardy and disease resistant.

HANSEN SUPER BUSH CHERRY

For EVERYONE to Enjoy

A sensational new flavor and a new method of fruit culture. Immense crops of fruits produced on a small area. Fruit is large, of good flavor and quality to eat fresh and makes the most wonderful rich jams and jelly of delicious flavor. The selection and improvement of Hansen Bush Cherries has been carried on by Prof. N. E. Hansen for over 45 years. These improved new Super Bush Cherries are the results of the work of many years of selection from countless thousands of plants. They are the Super Type—the biggest in size, the best in flavor, the greatest in productiveness and most beautiful in bloom.
